Education

University of Washington **Sep. 2023 – Present**
Bachelor of Arts in Geography: Data Science *Seattle, WA*

Experience

Kairo **June 2026 – Present**
Lead Data Analyst *Seattle, WA*

- Co-founded a weekly photo journaling app that has grown to 200+ users
- Mapped geotagged photo submissions in QGIS to identify regional engagement patterns, informing location-based prompt features
- Communicated data-driven insights to a 5-person team, guiding four UI redesign and the launch of new updates

Apple **Aug. 2025 – Feb. 2026**
Specialist *Bellevue, WA*

- Helped customers identify the right Apple devices and services by asking needs-based questions, comparing features, and explaining trade-offs in clear, simple terms.
- Collaborated with team members to track store goals and customer satisfaction metrics, adjusting sales strategies on the floor to improve conversion and overall experience.
- Maintained a positive, motivating environment by sharing product knowledge, supporting new hires, and communicating proactively during busy periods to keep workflows smooth.

Projects

Fire Map | *CARTO* **Mar. 2026**

- Cleaned and standardized global wildfire hotspot data, handling missing values and normalizing fields to ensure accurate visualization and analysis
- Configured CARTO data layers, styling, and interactive filters to let users explore fire activity by time of day, intensity, region, and date range
- Calculated summary statistics on hotspot counts by region and time window to reveal spatiotemporal trends in fire activity worldwide

Korean Speaking Cluster Map | *ArcGIS* **May 2026**

- Mapped census tract data on Korean speakers across King County, normalizing counts by total population to produce accurate choropleth maps
- Measured spatial clustering with Global Moran's I and Local Moran's I cluster and outlier analysis, finding statistically significant clustering for all three groups (Moran's I 0.41 to 0.55, $p < 0.001$)
- Compared contiguity and inverse distance spatial weights to select the best neighbor definition, and paired results with historical research in a written report explaining community settlement patterns

National Park Map | *ArcGIS* **Apr. 2026**

- Integrated National Park Service boundary data and U.S. city datasets into a file geodatabase, standardizing projections and attributes for reliable analysis
- Applied proximity tools (Buffer, Spatial Join, Select by Location) to measure how many national parks fall within set distances of major U.S. cities
- Summarized park counts and distances by city in tables and designed map layouts to communicate regional differences in park access

Technical skills

Languages: Python, SQL, JavaScript, HTML, R
Developer Tools: VS Code, CARTO, Knightlab, ArcGIS, QGIS, Figma
